

Single Modules in Risk and Safety Management

TÜVRheinland®
Risktec
Professional Qualifications

Risktec is a leading provider of professional training and education in Risk and Safety Management, with some of the world's most impressive companies as clients.

We offer distance learning training to students worldwide who are seeking a qualification in risk and safety management. The following Risktec Professional Qualification (RPQ) Single Modules are offered:

- Availability, Reliability & Maintainability Analysis
- Bowtie Risk Management
- Culture, Behaviour & Competency
- Emergency Response & Crisis Management
- Engineered Risk Control Systems (Oil & Gas)
- Functional Safety of Safety-Related Systems
- Hazard Identification
- HAZOP Study
- HSE Management Systems
- Human Factors in Design & Operations

- Incident Investigation & Analysis
- Oil & Gas and Process Industry QRA
- Oil & Gas and Process Industry Risk Studies
- Physical Effects Modelling
- Principles of Risk Management
- Risk Analysis
- Risk Reduction & ALARP
- Safety/HSE Cases
- Workplace Safety

These modules are based on the same content and learning outcomes as the modules which make up the Risktec postgraduate qualifications (PgCert, PgDip and MSc) but have a different, lighter level of assessment. They are directed at those who still wish to achieve a qualification delivered by industry-recognised practitioners, but have less time available for study than is needed for the university-validated programmes.

Module Information

Unique benefits:

- We believe the RPQs to be the world's first awards designed by professionals, for professionals, in the high hazard industries.
- The RPQs combine and condense the collective knowledge of over 50 of our most highly experienced consultants and aim to enhance the knowledge and practical skills of students.
- Enrolling on a Risktec module ensures that your learning is relevant to industry and the situations you are likely to encounter in the real professional world.
- Distance learning allows you to study at a time and location that best suits you, working at your own pace.

Risktec modules are designed for anyone seeking to implement practical risk management within high hazard industries, such as:

- Oil and gas
- Petrochemical
- Chemical
- Nuclear
- Transportation
- Mining
- Conventional power
- Renewables

How are the modules delivered?

RPQ modules are delivered via our e-learning environment, *Risktec Online*. Students download the module material which typically comprises 150 slides with explanatory notes, one or more videos, plus references to further reading and useful websites. You can participate in online activities including optional tests to confirm your understanding. At the end of each module you will be required to submit a 1,000 word assessment.

The modules are 100% online, enabling you to study and submit your formal written assessments from anywhere in the world. All students who complete a module successfully will receive a Risktec Professional Qualification award certificate.

Entry requirements

The ability to study and perform at ISCED Level 6 (a university bachelors degree), proven English language capability and broadband internet access.

Enrolment options

You can enrol on to any of these modules at a time that suits you. Multiple modules may be purchased simultaneously. As an alternative to Single Modules, RPQ programmes are also available*..
